

THE EUROPEAN UNION'S GROWING INNOVATION DIVIDE

REINHILDE VEUGELERS

EXECUTIVE SUMMARY

The research in this paper is based on data from the European Innovation Scoreboard (EIS) 2022, which provides a comprehensive overview of the EU's innovation performance. The EIS is a composite index of 11 indicators, ranging from research and development (R&D) to innovation in products and services. The EIS 2022 shows that the EU's innovation performance has improved since 2018, but that the gap between the EU and the United States has widened. The EU's innovation performance is still significantly lower than that of the United States, particularly in the areas of R&D intensity and innovation in products and services. The EIS 2022 also shows that the EU's innovation performance is more heterogeneous than in the past, with some countries performing better than others. The EIS 2022 provides a clear picture of the EU's innovation performance and highlights the areas where the EU needs to improve. The EIS 2022 is a valuable tool for policymakers and researchers alike, and it provides a clear picture of the EU's innovation performance and highlights the areas where the EU needs to improve.

The main challenge in research is to
 ensure that the research is relevant to
 the interests of the citizens. This
 requires a strong focus on the
 research that has the greatest
 impact on the lives of the citizens.
 The research should be conducted
 in a way that is transparent and
 accessible to the public. This
 requires a strong focus on the
 research that has the greatest
 impact on the lives of the citizens.
